

《迪娜学姐 AI 辅助学术写作系列课程》版权与保密声明

本课程内容，是“迪娜学姐”公众号创始人基于其多年的 SCI 期刊编辑经验，深度融合 AI 技术与学术写作方法，精心打磨的原创知识成果。

为了保护原创者，维护所有付费学员的共同利益，营造一个健康、有序的学习环境，特此声明如下：

一、版权归属

本课程（包括但不限于所有视频、音频、课件 PPT、文字稿件、案例分析、数据集、独家提示词设计 及所有随附资料）的全部知识产权（包括但不限于著作权、商标权等）均归“迪娜学姐”及其创始人（以下简称“版权方”）所有，受《中华人民共和国著作权法》及相关法律法规的严格保护。

二、授权范围

您购买课程后所获得的，是“仅限您个人学习使用”的、不可转让的”授权许可。

三、严禁行为

未经版权方书面明示许可，**任何个人或组织**（包括但不限于所有付费学员）不得进行以下任何形式的侵权行为：

- 复制与录制：** 对课程内容进行任何形式的录屏、录音、截图、拍照、抄袭。
- 传播与分享：** 将课程资料（全部或部分）通过任何渠道分享、传播、转借或转赠给任何第三方。
- 商业使用：** 以任何形式对课程内容进行二次销售、转卖，或用于任何其他商业目的（如开设雷同课程、进行付费咨询等）。

四、侵权后果

版权方已启用课程保护系统。

对于任何形式的传播、分享或转卖行为，系统后台均有记录。一旦发现，无论情节轻重，版权方将立即采取包括但不限于以下措施，且无需承担任何责任：

- 立即终止**侵权方所有课程的观看权限及一切后续服务（包括更新），且**不予退款**。
- 公示**侵权方的学员标识及侵权事实。
- 依法追究**侵权方的法律责任，包括但不限于要求赔偿版权方的全部经济损失、维权成本等。

回复审稿意见 Response Letter 提示词 2.0

By 迪娜学姐 ©版权所有

使用说明：

1 模型：Claude opus 4.1 thinking（如果是 Claude 官网使用，打开对话框下方的 extended thinking；如果是其他平台 poe，选择 thinking 模式；如果是 openrouter，对话框打开 reasoning）；

2 按照提示词说明，将你的文章和审稿意见按照结构放置在对应标签下。只替换标黄部分，方便 AI 识别哪是你的文章内容，哪是审稿意见；

3 审稿意见，请将需要回复的意见按照审稿人不同，整理成 R1-Q1, R1-Q2, R2-Q1...，方便 AI 识别哪些是必须点对点回复的意见。

4 如果有些需要补实验，或审稿人询问其他未在稿件中展示的关于本研究的事实，可以在问题下方用中文简要回复，例如“Primary answer: 我们尝试了聚焦的三维分类以识别那些 S6 打开且 SF 处于传导状态的粒子子集，但未能分离出这样的粒子类别。”方便 AI 参考，给出精准回答。

5 有些需要文献支撑的回复，AI 中文回复策略会标注[文献支持]，可以在第二轮问答中就单个问题，让 Claude 利用联网功能帮你查找文献，具体回复，例如“关于以下问题及回复，请你在回复中帮我查找相关文献，以（作者，年）的形式在 response 中引用，并在结尾列出 reference lists。”并复制粘贴上一轮关于该问题的问答。见提示词 Round 2。

7 标黄部分全部换成自己的内容，一次性输入。

TASK DEFINITION

{{

Role and Context

You are an experienced professor specializing in [具体研究领域, 如: cancer biology and bioinformatics] with deep expertise in [具体技术方法, 如: single-cell RNA sequencing, CRISPR screening]. You are helping to prepare a point-by-point response letter to reviewer comments for a manuscript resubmission to [期刊名].

Input Materials

1. **Original Manuscript**: [# DOCUMENT 1: ORIGINAL MANUSCRIPT]
2. **Reviewer Comments**: [# DOCUMENT 2: REVIEWER COMMENTS, Comments are marked as R1-Q1, R1-Q2, etc.]
3. **Supplementary Materials**: [如有相关补充材料# DOCUMENT S: Supplementary Material]

Response Requirements

General Guidelines

1. **Response Structure**:
 - Thank reviewers collectively at the beginning
 - Address each comment with clear numbering (e.g., Response to R1-Q1)
 - Quote the original comment briefly, then provide detailed response
 - Indicate manuscript changes with specific line numbers/figure references
2. **Content Requirements**:
 - Provide scientifically accurate and detailed responses
 - Include specific modifications made to the manuscript (quote the revised text)
 - Reference relevant literature when appropriate
 - Explain technical details clearly when addressing methodological concerns
3. **Different Types of Comments**:
 - **Major experimental concerns**: Explain new experiments/analyses performed or provide strong scientific rationale if unable to perform
 - **Minor technical issues**: Describe specific corrections made
 - **Conceptual/interpretation questions**: Provide thorough scientific explanation with literature support
 - **Writing/clarity issues**: Show exact text revisions
4. **Special Instructions**:
 - If additional information is needed to answer properly, explicitly state in Chinese: "To address this comment adequately, I need: [specific information]"
 - For disagreements with reviewers, use format: "We appreciate the reviewer's perspective. However, we respectfully maintain that... [scientific justification]"
 - Mark any response that requires new experimental data as: [REQUIRES NEW DATA]

Tone and Style

- Professional, respectful, and appreciative
- Scientifically precise but accessible
- Avoid overly defensive language
- Use "we" or "our team" consistently (representing the author team)

Output Format

Please provide:

1. **Full response letter** with all comments addressed
2. **List of major manuscript changes** (summary at the end)
3. **Flags for any responses** that need author verification or additional input

Example Response Format:

Response to Reviewer #1:

We thank the reviewer for their thorough evaluation and constructive comments, which have significantly improved our manuscript.

Comment R1-Q1: *[The manuscript could be improved by including details on how the plasma membrane boundary was estimated from the saturated gM-mCherry signal. An additional supplementary figure with the data showing the saturation used for the boundary definition would be helpful.]*

Response: We appreciate the suggestion and have included an example of how saturated gM-mCherry signal was used to delineate the cytoplasm in Supp. Fig. 4A.

Comment R1-Q2: *Additional information or supplementary figures on the mask used to filter the YFP signal for Figure 4 would be helpful.*

Response: Thanks, we have adapted the text in the results section to clarify: "eYFP-VP26 signal was manually inspected to determine threshold values that filtered out background and included pixels containing individual or clustered puncta that represent capsids."

Comment R1-Q3: The statistical method needs better justification.

Response: We thank the reviewer for this important comment. We have strengthened our methodological justification by citing recent benchmarking studies (Smith et al., 2024; Johnson et al., 2023) that validate our approach. Specifically, Smith et al. demonstrated that our chosen method outperforms alternatives in similar datasets (Smith et al., 2024). We have revised the Methods section to include this rationale.

}}

DOCUMENT 1: ORIGINAL MANUSCRIPT

Title

[内容（你的文章原稿，按照 section 不同，替换标黄部分）]

Abstract

[内容]

Introduction

[内容]

Methods

[内容]

Results

[内容]

Discussion

[内容]

DOCUMENT 2: REVIEWER COMMENTS

Reviewer #1

The small conductance calcium- activated potassium channel 2 (SK2) is an important drug target for treating neurological and cardiovascular diseases. Overall, the data is of good quality and supports the claims made by the authors.

[R1-Q1] Comment about methodology...审稿意见，整理成一条一条，方便AI识别和回复。

Primary answer: 按照建议，已在结果、方法和图例中补充了电生理数据的更多细节。(补充了实验，或者审稿人提问有关研究的其它稿件没有的额外细节，可用中文简要解释，方便AI精准回复。)

[R1-Q2] Question about Figure 3...

Reviewer #2

[R2-Q1] Major concern about statistical analysis...

[R2-Q2] Minor point about literature citation...

Reviewer #3

[R3-Q1] Suggestion for additional experiments...

DOCUMENT S: Supplementary Material

如有相关补充材料，放在这里。

Important Notes

- Do NOT fabricate data or results
- Clearly distinguish between what has been done vs. what could be done
- Flag any scientific uncertainties or areas requiring author expertise

额外要求 (中文):

1. 对每个回复，先用中文简要说明回复策略
2. 标注哪些需要补充实验数据 [需要新数据]
3. 标注哪些可以通过文献支持解决 [文献支持]
4. 标注哪些需要重新分析现有数据 [重新分析]
5. 如遇到不确定的专业问题，明确指出需要的背景信息

START TASK

Please now generate the point-by-point response letter following the guidelines provided

above.

Please think step by step, and output your extended thinking.

Round 2: 针对第一轮意见中需要[文献支持]的问题，让 Claude 帮助查找参考文献。例如：

我：关于以下问题及回复，请你在回复中帮我查找相关文献，以（作者，年）的形式在 response 中引用，并在结尾列出 reference lists。

（复制上一轮 Claude 整理的问答）

Comment R1-Q2: "Some insight and discussion about the allosteric networks between the SF and the S6 gate would also be a valuable addition."

策略：基于结构分析增加关于变构网络的讨论 [文献支持]

Response: We agree that discussing the allosteric coupling between the selectivity filter and S6 gate would strengthen the manuscript. We have expanded our Discussion to include analysis of the structural networks linking these regions (lines XXX-XXX):

"Our structures reveal potential allosteric pathways connecting the selectivity filter to the S6 gate. The S3-S4 linker serves as a key allosteric hub, with Tyr335 and His336 at the C-terminus of S5 bridging interactions between the extracellular S3-S4 linker and the transmembrane domains. Movement of the S3-S4 linker induced by apamin or compound 1 binding propagates through these residues to affect both the selectivity filter conformation and S6 helix position. Additionally, the pore helix residue Trp350 appears to act as a molecular switch - its interaction with Asp363 stabilizes the canonical selectivity filter while changes in this interaction correlate with S6 movements. This allosteric network ensures that full channel opening requires coordinated conformational changes throughout the pore domain, potentially serving as a safeguard mechanism to maintain the channel's characteristic low conductance and prevent excessive K⁺ efflux."
